Experience

Webull Technologies, Inc. | St. Petersburg, FL

Production Analyst | Python, Java, GitLab, SQL, FIX, Grafana, Prometheus, ELK, Jenkins 05/06/2024–Present

- Work with developers to manage version control and resolve code conflicts. 10%
  - In Gitlab
- Support the release of new software updates by coordinating and communicating changes. 10%
  - Support the release of new software updates by coordinating and communicating production changes to affected teams.
- Write scripts or tools to automate manual tasks. 10%
  - Write Python, SQL, and Bash scripts and tools to automate manual, time-sensitive operation tasks, including data validation and format migrations and upgrades.
  - Use commercially available AI tools to assist with writing automation scripts and reviewing logs during incident triage; this does not involve AI research or developing or training AI models.
- Document processes and assist in creating guides for team use. 10%
  - Document operational processes and create runbooks, troubleshooting guides, and onboarding materials for team use.
- Set up and maintenance of automated build, test, and deployment processes. 15%
  - Set up and maintain automated build, test, and deployment processes using Jenkins and Docker.
  - Maintain production FIX engine sessions with exchanges and market participants; diagnose session-level issues (logon, heartbeat, sequence recovery) and application-level message issues to keep order flow stable.
- Monitor the health and performance of backend systems and applications. 15%
  - Monitor the health and performance of backend trading systems and applications using Prometheus, Grafana, and the ELK stack.
  - Contribute to and maintain an internal Java-based monitoring and alerting platform (Spring Boot, Docker) and Grafana dashboards for real-time service APIs.
- Track and report system issues using internal tools, escalating when necessary. 5%
  - Track and report system issues using internal tools, assess severity, and escalate to development teams when necessary.
  - Investigate and resolve data discrepancies between post-trade and sales & trading systems and data inconsistencies in MySQL databases using SQL and Python.
- Respond to production issues and troubleshooting incidents as they arise. 5%
  - Respond to production issues and troubleshooting incidents as they arise, performing root cause analysis and restoring service.
- Monitor scheduled tasks and reports to ensure successful completion. 10%
  - Monitor scheduled tasks and reports that include daily SOD file processing, corporate action events, and post-trade reconciliation reports, to ensure successful completion.
- Participate in an on-call rotation to provide support during evenings or weekends. 10%

Novineer Inc. | Daytona Beach, FL (Remote) 09/29/2023-12/11/2023, 2024/01/31-3/18/2024

Cloud Engineer (Contract Role) | Python, Linux, AWS, Docker, Git, CI/CD

- Deployed and maintained Python backend services across Linux-based AWS EC2/ECS environments, using Docker and shell-based tooling to configure, troubleshoot, and scale production workloads.
- Built 17 REST APIs in Python using AWS Lambda, SAM, and API Gateway, integrating S3 pre-signed file access and DynamoDB data services while achieving sub-3-second API response times.
- Developed unit and integration tests for 42 Python Lambda functions using Pytest and Moto, reducing post-deployment issues by 90%, and automated build, testing, and deployment workflows through AWS SAM and GitHub Actions.

Education

Dual Master of Science Degrees in Computer Science and Electrical and Computer Engineering Jan 2021-Dec 2023

University of Florida, Gainesville, Florida **GPA-3.60**

Bachelor of Engineering in Software Engineering Sep 2015-July 2019
Guangzhou University, Guangzhou, China **GPA-3.44**

Skills

Languages: Python, Java, C/C++, Bash, SQL

Systems & Infrastructure: Linux, TCP/IP, UDP, Docker, AWS, Git, Jenkins

Trading & Observability: FIX, Grafana, Prometheus, ELK

Databases: MySQL, MongoDB, Oracle, DynamoDB, Redis

Certification: FINRA SIE
